

Get the most out of your roof

Installing a solar PV system on your roof is like getting paid to reduce your carbon footprint. And SolarWorld's Sun at Work® program, makes it simple to maximize your financial and environmental returns.

Look inside to find out just how much you could save by putting the sun to work for you.

SolarWorld. We put the sun to work for you.

www.solarworld-usa.com

Our Sun at Work® program makes it simple

Sunkits®

A complete high-performance solar electric system factory-designed by SolarWorld, the largest solar photovoltaic (PV) manufacturer in America since 1977

Professional Installation

SolarWorld's network of Authorized Installers are factory trained and audited to ensure that your system is installed safely and effectively

Financing

Financing and system options are available to fit your budget

Put the sun to work for you

Step 1 Call SolarWorld at **1-800-947-6527** or visit our web site www.solarworld-usa.com and we'll have one of our Authorized Installers set up an appointment with you for a free in-home estimate. After we evaluate your home's solar potential, you'll receive a detailed Sunkits® cost proposal and financial analysis showing how much you can expect to save.

Step 2 Order your Sunkits® solar electric system and schedule your install date then sit back and relax while your system is professionally installed.

Step 3 Claim your state and federal incentives, then watch your electric bills shrink.

SolarWorld. We put the sun to work for you.

Sunkits® put it all together for you

High-performance system

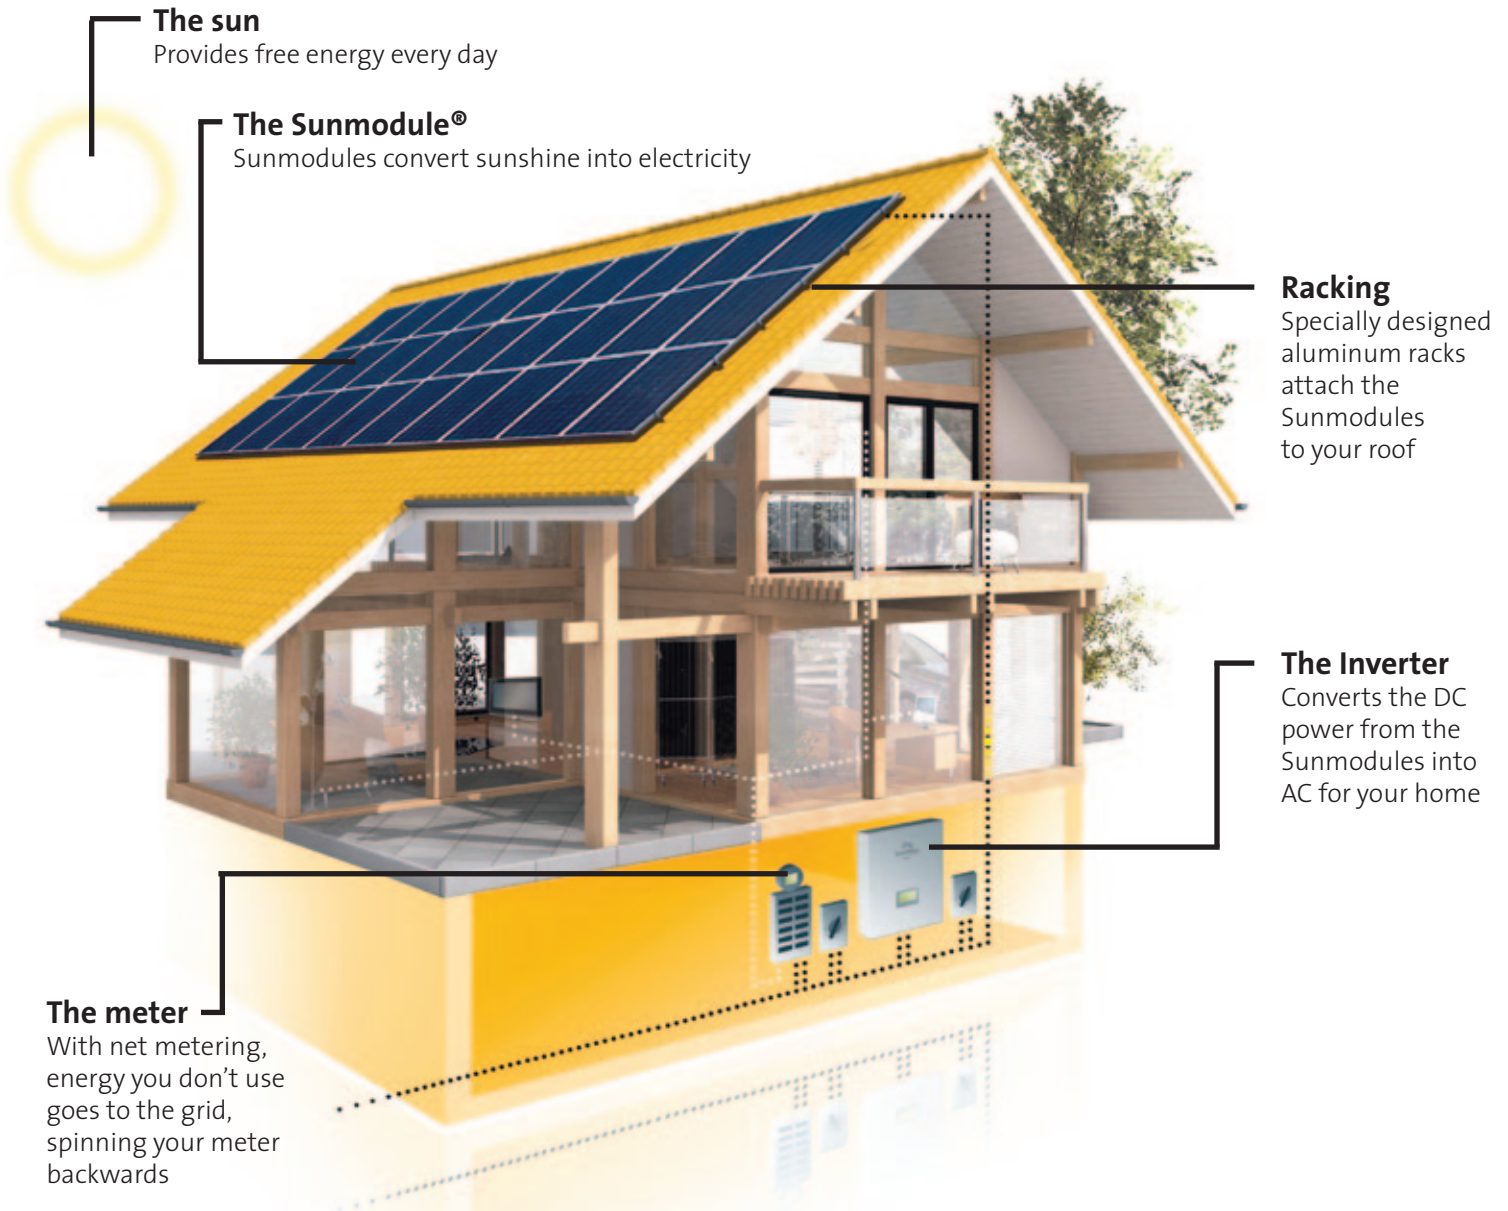

We start with our industry-leading SolarWorld Sunmodules and combine them with top of the line inverters and racking, specially selected for the highest system-level performance.

Custom-designed for your home

Each Sunkits® system is custom-designed at the factory for your home and your family's energy use.

Professional installation

SolarWorld's network of factory-trained state-licensed installers ensure that your system is installed safely and effectively.

Save money with **Sunkits**[®] in Southern California

Make a sound investment

• Complete 3.2 kW PV system installed cost ¹ :	\$22,050
• California Solar Initiative rebate ² :	-\$ 5,098
• 30% Federal income tax credit:	-\$ 5,085
• Net system cost:	\$11,866
• Increase the value of your home by up to ³ :	\$28,568

Cut your energy bills

• Average monthly electric bill without Sunkit ⁴ :	\$ 303
• Average monthly electric bill with Sunkit ⁴ :	\$ 180
• Annual savings in first year:	\$ 1,484
• Annual savings in tenth year ⁵ :	\$ 2,402

Get better than bank returns

• Annual return on investment in first year:	12.5%
• Annual return on investment in tenth year ⁵ :	20%
• Simple payback period ⁵ :	7 years
• Total savings over 25 years ⁵ :	\$71,856
• Total savings over 25 years ⁵ (minus net system cost):	\$59,990

Help save the planet

• CO ₂ emissions avoided over 25 years ⁶ :	94 tons
• Equivalent miles not driven:	306,376
• Equivalent trees planted:	1.6 acres

Get your PV system from a supplier you can trust

US-made SolarWorld Sunmodules come with a 25 year power warranty backed by the largest PV manufacturer in America since 1977. Sunkits are factory engineered systems, installed by factory-trained state-licensed electrical contractors.

1. Based on typical installed system cost in this region.

2. Based on optimal system orientation in SCE territory and Step 4 incentive level.

3. Based on 20 times annual savings - source: The Appraisal Journal October 1998.

4. Based on SCE residential tiered rate (D-10) and 1,300 kWh per month.

5. Based on PUC/IEA reported historical average 6% annual utility rate escalation.

6. Versus energy produced by coal power plant.

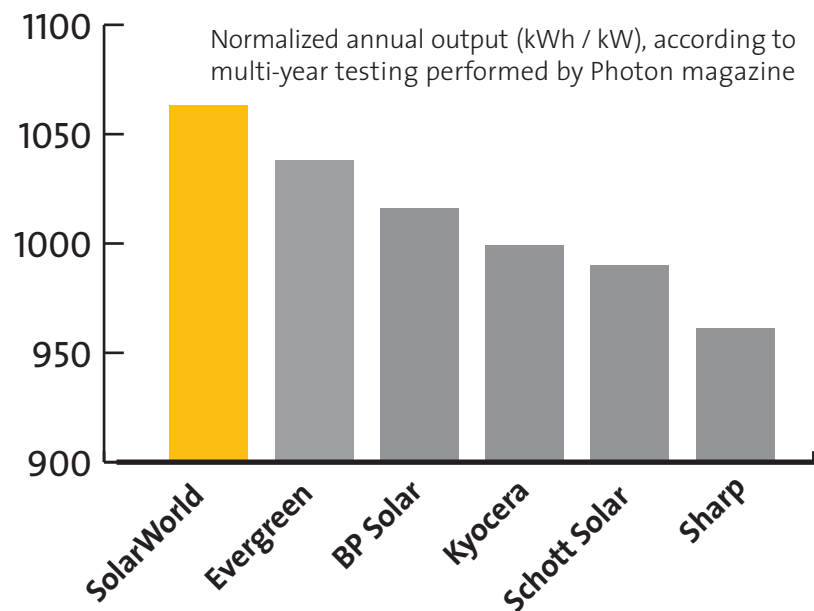

Sunmodule®

Highest energy performance

- 230 Watt
- ± 3% power tolerance (post LID)
- 6" Monocrystalline Silicon cells
- 25 year warranty
- End of use recycle program
- 39.41" X 65.94"

Better energy performance means more money in your pocket

It's not the kW rating of your PV system but the number of kilowatt-hours of energy it generates which determines how much you save on your electric bill. Independent testing over multiple years proves that the SolarWorld Sunmodule®, the heart of every Sunkit, generates more energy than similarly rated modules from other major brands.

And because the entire system is designed at the factory, all of the components are optimized to work together for the highest possible performance.

Proven superior reliability multiplies the SolarWorld performance advantage

Most PV companies have only been around for a few years and can only speculate how their products will perform long-term. With over 30 years of PV manufacturing experience, SolarWorld has had modules in the field for the entire warranty period. Independently monitored data from multiple megawatt-scale systems installed over 25 years ago confirms that our modules continue to outperform for decades.

Secure your investment

A solar PV system is a big investment, so don't settle for less than the best products from the best companies.

SolarWorld is the largest PV manufacturer in the USA since 1977

- Vertically integrated from raw silicon to modules and kits
- Financially stable with over \$1.2 billion in revenues
- Over 30 years of PV manufacturing experience

What does it really mean to be made in America?

For SolarWorld, being made in America means more than simply assembling foreign components in the USA, which does little to benefit the economy. By carrying out the entire PV module value chain in the USA, we are creating American manufacturing jobs not only at our factories but at our suppliers' factories as well.

SolarWorld is investing over \$500 million to expand US-based manufacturing, which generates hundreds of millions of dollars each year for American workers, goods and services.

SolarWorld is an industry leader

- First to offer a 25 year warranty for PV modules
- First to manufacture UL listed PV modules
- First to fully recycle solar PV modules
- First to build 1 MW+ solar PV projects
- First to offer grid tied PV kits

SolarWorld is a sustainable, socially responsible manufacturer

- Environmental impacts reported along side financial results
- Local manufacturing under strict environmental regulations
- Solar2World initiative supplies projects in developing nations
- Solar modules are recycled at end of use
