Hubbell Safety Evaluation

Workplace safety has a significant impact on your business. Employee safety and productivity, machine down time, and production throughput are all impacted by the condition of the work environment. Hubbell Wiring Device Kellems encourages and promotes a safe and well maintained work place, through the proper selection, use and installation of wiring devices. This brochure details applications, NEC references and product solutions to assist you in achieving those goals.

Hubbell recommends that you begin your safety inspection by reviewing the condition of existing installed wiring devices. Strong consideration should be given to upgrading to the most current wiring device technology and the latest NEC requirements.

It is extremely important that users adhere to the manufacturer's installation instructions when installing and using wiring devices. Proper product selection for the given application is important. Wiring devices are designed to perform specific tasks within the limit of their design, electrical rating and intended installation environment. Hubbell offers a complete line of wiring device products serving a wide range of applications.

HUBBELL SAFETY EVALUATION

A step-by-step checklist to help identify potential problems, from the wiring device experts...Hubbell.

Upcoming Training

- MARCH 3 - 9: FACTORY TALK ON TOUR - GREENVILLE, SC**
- March 8:** FactoryTalk Vantage Point EMI Configuration & Reporting - Atlanta, GA
- March 17:** FactoryTalk AssesCentre Configuration - Atlanta, GA
- March 22:** FactoryTalk Historian SE Configuration & Data Collection - Atlanta, GA
- April 5:** FactoryTalk Metrics w/Historian Classic Configuration - Atlanta, GA
- April 13:** FactoryTalk Transaction Manager - Atlanta, GA

Gigabit Performance now With Unmanaged Switches

The new SPIDER Gigabit switches.

Hirschmann developed the attractively priced SPIDER family for customers who are looking for a low-cost path to Industrial Ethernet. These simple unmanaged switches offer plug & play functionality in the lower area of the network pyramid. The fourth generation SPIDER switches feature higher port density and Gigabit-Ethernet on all ports.

Hirschmann's SPIDER family is an attractive solution wherever simple unmanaged switches are used in a star or line topology. These entry-level switches are ideal for process and factory automation, machinery manufacturing, industrial systems, printing presses, etc. The fiber optic versions guarantee interference-free data communications over considerable distances.

Rugged design and IP30 protection ensure that these industrial switches perform flawlessly even in extreme environments. Excellent EMC immunity negates the effects of strong electrical fields. Good resistance to shock, vibration and temperature protects the switches in harsh industrial environments.

Clean Energy Products

from McNaughton-McKay

McNaughton-McKay strives to be good stewards of the environment by operating green facilities and promoting clean energy products and solutions. We are uniquely positioned to make a significant impact in this area. We feel we have a responsibility to our customers to help educate you about clean energy. It is our belief that you will be able to turn these ideas into cost-saving opportunities and at the same time do what is right for the environment. With our knowledge and experience in the areas of solar, lighting, power, energy management and recycling, we stand prepared to support you in any number of applications.

Becoming a good steward of the environment cannot be achieved in a single action, but needs to be a part of our everyday lives both at work and at home. We encourage our customers to try to identify ways you can reduce the amount of waste generated and the amount of energy you consume. By starting with small changes that can add up to substantial changes, we can all have a major impact on our environment that will benefit future generations.
